$\qquad$

## PRACTICE \#4: Velocity v. Time Graphs ANSWER KEY

1. The velocity is the same at every point from 0-10 seconds.
2. 

3. Move away from the flagpole at $5 \mathrm{~m} / \mathrm{s}$ for 5 seconds. Next, move towards the flagpole at $5 \mathrm{~m} / \mathrm{s}$ for 5 seconds.
4.

5. Move away from the flagpole while steadily increasing speed.
6.

7.

8. Move away from the flagpole while increasing your speed. Then slow down to a stop. Next, move towards the flagpole while speeding up. Finally slow down to a stop.
9.

10. You end up at the flagpole:

$$
d_{1}=(3 \mathrm{~m} / \mathrm{s})(4 \mathrm{~s})=12 \mathrm{~m} \quad \begin{gathered}
d=v t \\
\boldsymbol{d}_{\text {total }}=\boldsymbol{d}_{\mathbf{1}}+\boldsymbol{d}_{\mathbf{2}}=\mathbf{0 m}
\end{gathered} d_{2}=(-2 \mathrm{~m} / \mathrm{s})(6 \mathrm{~s})=-12 \mathrm{~m}
$$
